DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, 4, 9, and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Charneski et al (6,355,562).

Charneski discloses the claimed process at col. 8, line 65 to col. 9, line 20, col. 10, lines 1-40 and the example. It is noted that water vapor is flowed at 110 sccm when it enters the chamber given the disclosed flow rates for the helium and argon carrier gases.

Allowable Subject Matter

Claims 5-8 and 12-14 are allowed.

Claims 2 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: Charneski refers to Nguyen et al. (5,744,192) cited by applicants for its motivation to add water to the deposition process (Nguyen was cited by applicants in the 16 October 2001 IDS) A review of Nguyen et al. reveals that the flow rate for water to the vaporizer is between 1 and 10 ml/min (col. 7, lines 64-65). The lowest endpoint of this range is an order of magnitude larger

Art Unit: 1762

than the high endpoint of the claimed range. There is no motivation to provide flow rates of water as low as the claimed range in view of the art of record.
